Description

On a Tiki24 I set up multilingual, I setup a tracker with a few multilingual fields. (tracker field option)

I add items and fill some multilingual fields.
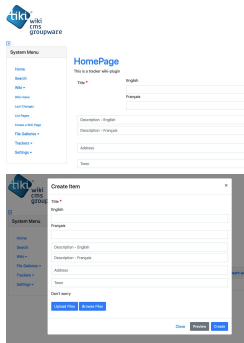

Then, I disable multilingual.
When I go to the fields options, the multilingual checkbox is not displayed anymore. (good)

When I go in the tracker interface to view items, the other language fields values are displayed. (weird... but do we allow loss of data ?)
When I go in the tracker interface to create a new item, the other language fields values are displayed. (wrong)
When I look at a wiki-plugin tracker the other language fields values are displayed. (wrong)

Seems it was like this in Tiki23.
I worked and committed something on the area (title field as placeholder) for Tiki24.
I'll check if I can commit a quick fix... but not today ;-)

Bernard Sfez / Tiki Specialist 24 Jan 22 12:50 GMT-0000

Ok I found the issue I can't fix that.
The value for the field multilingual (the checkbox) is still set even if we don't see it.

```
'isMultilingual' => string 'y' (length=1)
```

We need a mechanism that nullify this value (any field) is the Tiki multilingual feature is turned off.
I think the closest to the fields settings the better.
Nullifying in each template look to me like a cheap solution.

Example, at templates/trackerinput/layout_flat.tpl somewhere in the foreach.
{if !$multilingual}{$field.isMultilingual=''}{/if}
