Description

If you change a listing, like on the Wishlist, and change sorting order, the URL gets an additional mention of the sort order.

But it's reversed, compared to the actual setting. So if you want to sort the Wishlist by modification date, descending (which IMHO should be the default), so the latest are listed at the top, the URL states

https://dev.tiki.org/Wishlist#sort_mode=modification_date_asc

ASC=Ascending. If you change sorting to ascending, the URL states _desc...

d.t.o still shows this bug. d.t.o does not display it's version, but I assume it to be either 24 or 25.
Adapted version info of the bug report to reflect that. Attached a screenshot to illustrate.
