Description

On a real server using Debian 10 + Virtualmin as set following :
<https://bsfez.com/article58-Install-Tiki-Wiki-from-Git-Virtualmin-and-Debian-10-on-AWS-EC2-instance>
e Hebrew and French accent are now broken in module only (so far).

Same on a fresh local Tiki24 Beta

On both case I used to upgrade an existing database. (tiki22 and tiki24alpha)

I created an instance on show2 where it is working fine.

I compared <http://bsfez-11581-8080.show2.tikiwiki.org/tiki-check.php> with mine

<https://www.bernardsfez.com/tiki-check.php> and there are quite the same about encoding.

Version 10.3.31-MariaDB-0+deb10u1 (my server)

Version 5.7.34 (my local)

Version 10.1.48-MariaDB-0ubuntu0.18.04.1 (show instance)

I reverted the last update and things are back to normal (this ticket).

So the use is caused by one of these:

Solution

The problem was introduced in !1178 MR by unnecessary use of `DOMDocument` which creates whole HTML DOM including !DOCTYPE. See

https://gitlab.com/tikiwiki/tiki/-/merge_requests/1178#note_846266956

Fixed in master: https://gitlab.com/tikiwiki/tiki/-/merge_requests/1307

Fixed in 24.x by cherry-picking:

<https://gitlab.com/tikiwiki/tiki/-/commit/b54114650f1014d39b6c19c740a6b3b2bf26d052>

AFACIT, it's just modules. Victor will solve:

<https://avan.tech/item74375-At-least-2-modules-on-tiki-org-character-encoding-regression-in-24-x-looks-like-it-only-affects-modules?from=Add-a-task-confirmation-message>

luciash d' being 18 Feb 22 00:44 GMT-0000

Fixed and tested. See https://gitlab.com/tikiwiki/tiki/-/merge_requests/1307

Roberto Kirschbaum 18 Feb 22 09:17 GMT-0000

Thanks @luciash d' being !

Marc Laporte 18 Feb 22 16:41 GMT-0000

dev.tiki.org is on 24.x daily update and now working fine,

Bernard Sfez / Tiki Specialist 20 Feb 22 07:57 GMT-0000

@luciash d' being ☐, good fix (it just take me 2 pass to have it applied)

I couldn't see a fix on the first pass while I created a new Tiki24, populate a new backup of my database, tested on OSX Safari, Firefox, incognito, flusing caches/cookies, manually deleted cache menu and modules, tested on Windows10... what else ? ?

I went back to a Tiki22 of the same version of my database and upload a fresh Tiki24 version of Tiki and it seems to work (encoding if fine).

SO... I redo the all operation on my Tiki24 (bernardsfez - local) using my last Tiki24 database and this time it worked. ??σ

Thanks for the fix.
