Description
On most of Tiki search tools, I can look for items using the object title with partial terms. bernard will output : bernard-sfez, bernard sfez, etc.

The same is not true using the tracker field relation find bernard will output : bernard sfez (only)

To find "bernard-sfez" I have to type the entire string. This is not consistent with the other place a user may look up for something.
This makes this feature harder to use.

I even feel like they were a change in behaviour at some point of Tiki23.
