- ● Add a payment interface for Klarna to payment/cart

Description

There are several ways how a visitor of a Tiki could pay for goods and/or services, but Tiki supports almost none of them (Paypal is the only internationally accepted solution offered).

Besides credit cards, which Tiki does not support, several national solutions exist (that Tiki doesn't support either). Most of them are proprietary API, every bank has it's own. From the European Payment Initiative Council comes a new standard: SEPA request to pay.

It's a standardized way that streamlines the process. The user doesn't have to transfer money by having to open up his/her online banking, entering the very long (and thus error prone) IBAN, and the Tiki doesn't have to deal with differing APIs for different banks.

SEPA request to pay works like this: When the shop requests payment, this is being transferred via SEPA request to pay to the user's bank, which adds the request to the homebanking of that user, so the user can confirm the payment within the trusted environment of his/her homebanking, an error free and trusted way to deal with payments. From the Tiki point of view, the unified specification is a big plus: Only one code base needed...

The standard can be found at this link, the homepage of SEPA request is

Prerequisite not listed: PHP must be on 7.1 or newer, otherwise this error is thrown:

```
(uiserver):MYUSERID:~/MYDIRECTORY$ php console.php scss.compile MyTheme X-Powered-By:
PHP/4.4.9 Content-type: text/html <br /> <b>Parse error</b>: syntax error, unexpected T_STRING,
expecting T_CONSTANT_ENCAPSED_STRING or '(' in
<b>/homepages/0/MYHOMEPAGE/htdocs/MYDIRECTORY/console.php</b> on line <b>9</b><br
/>
```

My ISP (IONOS/1&1) still uses PHP 4.4.9 as a default. Newer PHP can be utilized by stating php7.2 instead of php (this is of course dependant on your ISP). But PHP level should be listed as a prerequisite for this command line call. And, btw, of course command line access (or rather, SSH) is also required and should be listed. This could mean about half of the user/admins can't do it anyway, not everyone has SSH access... I was only granted SSH four years ago by my ISP...
