Description

After being uploaded it should be possible to categorise ALL files of a Gallery or to select several and categorise them with 1 or 2 clicks.

You can categorise a gallery BUT it will not apply the category change to the inner files of the gallery.

When you are in the gallery you can view the files in the gallery and can select several files to move them, delete them, etc but not to categorise them. This is really missing (after moving image gallery or reorganising a Tiki) as you have to edit one by one the file properties and categorise it.

On the Category Admin side there is not easy way to do this either. You can categorise a Gallery but not the files in it.

You have to search categorise each object one by one. Not humanly doable....

Solution

1. When categorising a gallery there should be an option to categorise also the file in that parent category.
2. On the tiki-list_file_gallery.php page (viewing the files list) at the bottom we should have an new action "Categorise" that open a category multi-select to be applied on the selected (checkbox) file in the file gallery.
