Description

Having this code on a page:

```
{EVENTS(calendarid="2" datetime="1" max="10" usePagination="y")}{EVENTS}
```

Will work fine when logged in, but will generate a db_error when not logged in.

Also, tiki-calendar.php is generating a php error on line 284, as TikiLib::date_format('m', \$ddday) returns 'm'. I changed this line of code to instead use %m, and that seemed to fix the problem.

Events should be viewable without having to be logged in. Of all the wiki features, I think I've had the most trouble with events and calendars. Plus there really needs to be a way of making them look better when they are working. Thanks 😊
