Description

The global navbar color assigned on tiki-admin.php?page=look is always applied, so when assigning a menu module and giving it a parameter like "navbar class=navbar navbar-expand-lg navbar-light bg-light", when the global pref is "dark", this is the result in the page source: `<nav class="navbar navbar-expand-lg navbar-light bg-light navbar-dark bg-dark" role="navigation">

The combination of color classes causes problems for link colors, etc.

There are times when, because of the theme colors, both navbar-dark and navbar-light are needed, like when the topbar zone has a dark background and the page footer has a light background, so when a per-module color parameter is specified on admin-modules, it should replace the Look and Feel global setting, not be added to it.
