Description
~~Argument 1 passed to helper_function_contruct_menu_url_from_db() must be of the type string, null given~~ (fixed now)
A bug in the menu causes the navigation bar not to appear

~~Full screen looses menu~~
~~The full screen feature is making menu invisible~~ (Not a regression or bug)

Accessing a non-existent page causes the css not to work

The fixed menu bar is not readable and in addition does not take up the entire width of the page
When you visit most of the pages the page descends from it, the main menu bar disappears, however The fixed menu bar that is displayed is not readable due to a lack of background and in addition does not take up the entire width of the page. 'screen.

User are seeing TODO
In https://nextdoc.dev9.evoludata.com/Mac-Tools page there are sections with content TODO. Think it could be better to hide them.

Error: Cant find community-bigbluebutton
Prefdoc plugin error when going to https://nextdoc.dev9.evoludata.com/BigBlueButton

~~Illegible text on a hovered or right-selectedlink anchors~~ (Fixed)
~~On~~ https://nextdoc.dev9.evoludata.com/Tiki22 ~~the text is not Illegible on a hovered or right-selected link anchor.~~

Comments

Marc Laporte 03 Nov 22 01:45 GMT-0000

Error: Cant find community-bigbluebutton

Thank you for pointing out it's PluginPrefdoc

Looks like it was moved to:
rtc-bigbluebutton

So how to deal with a case like this where info changed places?

Marc Laporte 03 Nov 22 01:49 GMT-0000

Related topics has bullets with no content
See https://nextdoc.dev9.evoludata.com/User-Files

Not a regression. Just bad content.
Fixed: https://doc.tiki.org/tiki-pagehistory.php?page=User+Files&newver=10&oldver=9

Next time, just fix content in production directly.

Emmanuel Masikilizano 04 Nov 22 11:09 GMT-0000

Thanks, we'll take that into account next time!

Emmanuel Masikilizano 05 Nov 22 17:49 GMT-0000

@Marc Laporte I just noticed that there are bugs reported here but which already exist on doc.tiki.org (therefore which are not regressions as such). For example for the case of visiting a non-existent page, the css is not working.
Should we report these kinds of bugs on this same page?

Emmanuel Masikilizano 05 Nov 22 18:07 GMT-0000

I don't know if "Full screen looses menu" should be reported here because I feel that's how full screen should react. I also note that even the footer disappears in Full screen.
Anyone to confirm?

Gary Cunningham-Lee 10 Nov 22 12:37 GMT-0000

The design of "full screen" really is to remove everything except the main content area (div.col1). so the side columns, top header, topbar and page footer all get removed, to maximize the content area. I guess years ago when displays were smaller and lower-resolution, that was important. Maybe we should talk about if this is the best, still, or if it would be good to display the page footer or other page element even on "full screen."

(Related: I want to check if CSS variables can be used for switching to full screen because then it can be done without a page refresh.)

Emmanuel Masikilizano 14 Nov 22 09:36 GMT-0000

Noted. Thanks! Yes, I think removing the top bar and footer is not very necessary because the user might need it to navigate to other menu links.

Emmanuel Masikilizano 14 Nov 22 10:06 GMT-0000

I tested the report "Accessing a non-existent page causes the css not to work" and it seems to me that it is something quite different from a non-existent page.
If you visit a non existing page like for example https://nextdoc.dev9.evoludata.com/Domeshow the css works correctly. But with what's on the capture I believe it's the construction of the URL that Tiki can't figure out. **@Josaphat Imani Nathan** What do you think?
