Description

I see strange behaviour when setting the "PluginRegisterMemberPayment".

On my fist save it show something close (I didn't ask to see the users... but may be because I'm admin...) to the parameters.

Then after a refresh logged as admin or logged as registered user it doesn't show the settings. Using an incognito windows and flushing the cookies doesn't helps. (on the first browser I'm admin and a simple user on the second)

I categorized it as a regression, because it used to work fine and was broken.

Documentation page: <https://doc.tiki.org/PluginRegisterMemberPayment>

It is reproducible, see the show instance.

By the way if I load the instance page as Anonymous I see an error message "Insufficient privileges". I don't see an information in the doc about not allowing Anonymous to see the plugin, On the

contrary the plugin is described as a way to Register and Pay.
