Description

I am using Tiki 24.2 on a fresh install on CentOS 8, MariaDB 10.3.28 (InnoDB) and on client side Ubuntu 22.04 with Firefox 107.0.

Just added a new category, works fine. Added a subcategory. This subcategory is there (showing in various menus as "category::subcategory" where i have to select a category), but it is not showing at all when just listing the categories. In Tiki 21.5, categories with subcategories are shown with a little triangle left to them, so they can be opened to show the subcategories. In 24.2 this triangle is not shown at all, I cannot access the subcategory at all.

I noticed a link text beneath the search form "show subcategories", but it does exactly nothing.

Easiest fix would be to revert behaviour to what it was in Tiki 21.5 as it was working fine.

show2.tikiwiki.org is not working. It greets me with this text:

Tiki Installer missing third party software files

Your Tiki is not completely installed because Composer has not been run to fetch package dependencies.

You need to run `sh setup.sh` from the command line.

See <https://doc.tiki.org/Composer> for details.
