Description

After an install from git, when you open setup.sh you see:

Tiki setup.sh - your options

====

Composer: If you are installing via a released Tiki package (zip, tar.gz, tar.bz2, 7z), you can and should skip using Composer. If you are installing and upgrading via SVN, you need to run Composer after 'svn checkout' and 'svn upgrade'. More info at <https://doc.tiki.org/Composer>

Obviously this need to be updated as we are not using SVN anymore but git and Gitlab.
