Description

When you add for the first a KanBan plugin to a Wiki Page you may see the following error:

User error

Security -> API access is disabled but Kanban plugin needs it.

There should be a way for an admin to enable the API access right away and solve this minor issue.
Or at least a link to the relevant control panel.

Solution

Fixed in <https://gitlab.com/tikiwiki/tiki/-/commit/96ae218c4f17b8451f02757cf7f95ada1c2e446a>

Wow, I wanted to push this to a junior, but it seems there is now API to get the settings page for an arbitrary preferences. Added a proof of concept which fixes this, and makes it less painful than it was, but this really needs to be solved in a plugin abstraction that will work for all plugins.
