Description

Trying to install tiki 25.1. New clean directory next to 25.0.
Only changed apache2 sites available config paths from /25.0 to /25.1
Copied local.php from 25.0/db to 25.1/db
Restarted apache2, cleared browser cache.
PHP 7.4.33 (cli) (built: Feb 14 2023 18:31:54) (NTS)

Is there something missing from 25.1 ?

Solution

forgot to copy *.pem files from /db/cert in olderer version to new folder. 25.1 now works great.

Why is tiki looking at 'zzz' I presume "retired tables", is this stopping 25.1 from connecting to the DB?
