Description

It would be good to be able to prevent wiki pages in a specified category from being listed by this module (last_modif_pages). For example, at the *.tiki.org sites, there are "Archived" and "Retired" categories for wiki pages that have old content, etc. and so are for admin users or registered users only. When a page is edited to be categorized in one of these categories, it is then listed in the module, but this isn't a change that needs to be, or should be, publicized, since the page is being removed from access.

There should be a field in the module parameters like "Don't list pages in these categories", where category names or ids could be input and pages in these categories wouldn't be listed in the module.
