Description
If you enter following code in a wiki-page ...page... there is a bug in the interpreter. The preview-mode is working right and shows ...page... as plain text, but when you save the page wiki-parser interprets it as a tag and shows the pagenavigation-bar.

Importance
1 low

the page thing is supposed to make a new page when in view mode.
In edit/preview mode, the pagination could be annoying though...

Bug still exists in 2.2
I know it can be regarded as a feature, but everything between the ~np~ tags should not be parsed.
