Description

From Tiki26 the slideshow feature default setting have been changed and this breaks previous slideshows using H1 to H3 to create slides.

i don't have access to the contents of the page:

<https://www.bernardsfez.com/Open-Source-model-presentation> so i based myself on the contents of <https://tiki.org/Tiki+Suite+Slideshow> since that's the reference you took. i see that it works and even when i go with it on master and 26.x

could you give me more details? if of course you still have the same problem. if not, I suggest we close this ticket. thanks @**Bernard Sfez / Tiki Specialist**

I believe there was a change of behavior in the plugin slideshow.

I see a new parameter "headingLevelSlideSeparator" since Tiki 26 at <https://doc.tiki.org/PluginSlideshow> but it hasn't been documented on the Tiki26 documentation (<https://doc.tiki.org/tiki26>) or the plugin page.

Old Tiki slideshow where this parameter doesn't exist were using H1 to H3 to create a slide by default. After Tiki26 the default is H1 (only).

This change is breaking previously working slideshow that were using from H1 to H3. For them, the "headingLevelSlideSeparator" has to be set to 3 to fix the issue.

This should not have happened (without documentation?). I'm not sure energy should be pend on this and it should be addressed... I close.

PS: I will add a note on the documentation.
