Description

<https://github.com/vasturiano/3d-force-graph> is the source of possible 3D directed graphs. It would be interesting to have a plugin that allows tracker data to be represented as a 3D interactive graph.

If anyone is interested in this feature I can post my own attempts to get it working on tiki 25.2. It will be a very raw attempt and may not be done in a form that fits with a tiki plugin but maybe some else can format it as a plugin or give me guidance, templates/php are not my strong point.

Hi, **@Kevin Doyle!**

Thank you for sharing your exciting feature request with us. We appreciate your input and enthusiasm for enhancing the visualization of tracker data within Tiki.

The concept of using 3D force-directed graphs to represent tracker data is indeed intriguing. The interactive and dynamic nature of such graphs could provide valuable insights and a unique perspective on data relationships.

We have taken note of your feature request, and our development team will explore the feasibility of implementing a plugin that allows tracker data to be represented as 3D interactive graphs in Tiki. While we cannot guarantee immediate implementation, your idea has been added to our feature enhancement discussions.

Thank you again for your innovative suggestion.

Best regards,

The Tiki Community Support Team
