Description
On a wiki page when you create a wiki link from the toolbar on the page field there is an autocomplete/search system that allow you to insert existing pages.

This is not working anymore and the field (page selector) is not populated. It has been tested at doc.t.o the bug is also visible on dev.t.o and other Tikis.

This is basic Wiki Page and it is important it is fixed rapidly.

Note: If I insert manually the wiki link, "Tiki Newsletter February 2024" is ok while "Tiki-Newsletter-February-2024" is not ok. Somehow I remember it should work the same with the dash.

Hey @Bernard Sfez / Tiki Specialist!
Thank you for reporting this issue with the Wiki Link modal.

We have reviewed your report and can confirm that we understand the issue you have described. We will investigate this further and make sure there are no duplicates of this issue. If the issue is easy to fix, we will do our best to fix it in a timely manner.

Thank you again for your contribution and for helping us make Tiki better for everyone.

Best regards,
The Tiki Team
