function user_has_perm_on_object wrongly returns false where categorized but no perms set in cat

Description
I'm not set up as a developer right now and anyway don't know enough to know which branch is which... Perhaps someone else can get onto this? Simple fix. Obvious error.

tikilib.php, 1.9 CVS HEAD line 3528, revision 1.656

if ($is_categorized && !empty($categperm) && $categperm != 'y') {
    return (FALSE);
}

Solution
should be
if ($is_categorized && !empty($$categperm) && $$categperm != 'y') {
    return (FALSE);
}

In which case? Did your really have a case - or is it only a code reading.

Because so far I know there is no call to this function with categperm= ""?
!empty( $ $categperm) will also be never empty ( all cats are y or n)
PS: I would like also to replace this call in most a the case with get_perm_object - because 1) usually
you need all the perms around this object (for the buttons...) 2)the perm on the categ is better
integrated - it is easy to connect perm on categ with perm on object

sylvie

koth: to recreate the case, create a new category (without setting any perms). You then put a wiki
page in that category. After that, turn off tiki_p_view_categories for anonymous group, if not already
done. Try to access that wiki page that you created earlier as anonymous. You will not be able to
access it.

koth: After discussion with sylvie, this is expected behaviour. The !empty($categperm) does not seem
necessary but anyway, the implementation will be different in 1.10. Left as it is.
