Description

Text areas are nice. But wiki pages with history are even nicer.

Not sure how it could done though...

I guess folks might end up wanting to include just about any Tiki object type? I personally would like to see blog posts included as a type. As an alternative, a nice "generic" field type would allow a url that renders as a hyperlink when viewed.

mstovenour 22 Mar 08 19:03 GMT-0000

I've been thinking about how a Tiki object field type (e.g. wiki page) would work. Ideally the user should be presented with a list of objects and allowed to select one; the tracker would then include a reference to that object. This could get real messy on any reasonably large site. It would probably require some type of "chooser" popup screen. There the user could enter a key word filter and select from the result set. This is clearly not trivial but the functionality could be used in almost any other place where a user might want to include a link to an existing Tiki object (e.g. in a wiki page where a link to an image gallery object is desired). When the tracker field is created, the designer should be able to pick which Tiki objects are allowed in the selector (e.g. only allow Wiki pages)

Marc Laporte 24 May 08 18:58 GMT-0000

workaround is to use the wiki page include plugin (idea by mlpvolt)
