Description
Ok Marc Laporte asked me to explain here wut i experienced with the image gallery on ver 1.9.7 on mandrake 10.1, and the GD i used is the 1 that comes with the install media of mandrake

(i said this on the irc channel)
http://www.opensourcecms.com/index.php?option=content&task=view&id=180 at this demo is where i watched the same bug

(He asked me this)
Can you post on dev.tikiwiki.org a explanation on how to see the bug? I will take a look at it. There was some recent work to improve the image gallery. This must have introduced a bug...

Here it goes (hope i may this right)

the problem with the bug is not a thing u can C, in fact is the opposite to that, the computers hang up and do not do nothing after u want to c the page with the thuninbails to chose wich pic to watch closer.

more the a few times i had to restart the mysql and the apache services on the computer to work again cuz the hang made the server not to work properly in order to complete the request.

once i restarted the services tryed to c the same gallery and then i saw just the word "thuninbail" where the actual thun should be, those times that the server didnt freezed.

Thats the way i detected the bug.

In fact .. when i tryed the demo (earlier on this post) had the same effect, but here i couldnt restart the apache (lolz) so i couldnt enter there till the restart of the demo
