Description

We can already send in content to Tiki via email:

add/edit wiki
add articles
via tiki-admin_mailin.php

and add forum posts via
tiki-admin_forums.php

joe at joe.com sends an email. The system recognizes that joe at joe.com belongs to the user "joe" and adds the tracker/wiki edit/forum post/article as if the user joe had logged in and added it via the web form.

Make this optional for security reasons. If someone spoofs the email address, he could send in content for someone else.
