★★★★★ (0) ?

Description

In Tiki 1.10, there is a feature to protect all emails against spam harvesters. Great.

1- Check that this protection is indeed powerful (so spammers can't get around it)

2- Have an option to show an image of the email when javascript is not available.

3- Extend this protection to the e-mail address in tiki-contact.php

Importance

The email protection already generates a NOSCRIPT alternative when JS is not available.
