Related-to
   • Send Wiki Pages XMLRPC erases remote host information when adding pages to send
   • Can't add blog post title through xmlrpc.php (using blogtk, or gnome-blog-poster)

Description
   I have posted several items to a blog through xmlrpc.php, using bloGTK 1.0 (GNU/Linux), and they are posted in Tiki (except for the title, which I already reported another bug at this tracker).

   I can select afterwards any of the posted items, and edit from bloGTK. When I post the edition,I get the message (in local) that the post have been successfully updated, but then at Tiki, the blog post dissapears from the list of posts.

   Using "Blogger" Blogging system, in BloGTK configuration.
