Description

When displaying a Wiki page as slides the wrong favicon is displayed. I'm using 1.9.11 and the favicon from Xampp is displayed which is found in the root web directory ./htdocs/ rather than using the favicon found in the TikiWiki directory ./htdocs/tikiwiki/

Solution

Favicon displayed during slides should be the same as for the rest of the site as defined in admin->general settings or consistent default icon for the entire site if undefined.

Otherwise a workaround is to replace your default Xampp installation favicon.
