Description

the structure will not be sorted correctly in a wiki page while it is sorted as it should be in the
structure

i tried to change the pos row in the database directly, but that doesn't helped

after expecting the db for these items i think i might know where the problem is - it is sorted by the
page_ref_id instead of pos field

example (where pos is the position in database and the should be sort order) :

Page Name	pos	page_ref_id	pos in wikipage
Concept	1	49	2
Exhibition	2	75	4
Facilities	3	24	1
Portal	4	89	6
Handbook	5	68	4
Resources	6	55	3

as you can see it is sorted after the page_Ref_id instead of pos in a wikipage

edit: on the other hand in another tiki there is no such problem as described above

Workaround

Thanks DeserWolf for reporting; Structures are buggy indeed in tiki 2.4 still. Could you please retest in Tiki 3.1+?
