Description
In the new version of tikiwiki 3.0 is the tiki-3.0-pgsql.sql wrong. It looks like a copy of the mysql file. BUT: not only the pgsql, also the sqlite and oci8-file.

There are still the ENGINE elements, and some special types from mysql like KEY instead of INDEX or Triger for pgsql

Solution
Fixed in trunk and for next version 4.0.
About a fix for 3.0: it's being looked into this issue.

Hi!

I have the same problem here, I took a look at the two files, tiki.sql and tiki-3.0-pgsql.sql, and these files are not the same, it looks like if the "convertion processes" was not completed, the DROP TABLE IF EXISTS are correctly replaced to DROP TABLE.

I got a question on this:

I'm willing to take the time in fixing the file (its no big deal), but: is anybody actually maintaining the pgsql code for TikiWiki?

I hasn't tried the rest of TikiWiki with pgsql yet, I installed it with mysql just to take a look at it, but I don't want to go "live" with mysql: I just don't like it.

Thanks for working on this great project, I hasn't finished evaluating it, but I like it this far.

It's known and fixed in trunk, so definitely for next version.
I'll also check if I can/will submit it for 3.0 branch.

In the past there was nobody to maintain it so it became useless.
When I did learn about tiki I decided to fix it.
I finished today. 😃
So expect it to work in the future, latest: 4.0
