Description

Hi:

I can't add recurrent events in this web site:
<http://moviments.net/uelm/tiki-calendar.php>

Neither me, nor other editors in this web site.
Single items can be added with no problem.

However, I've tried to reproduce the problem in local , and I haven't been able to do so. I can add single events, and recurrence rules without problems.

I can provide the db of the problematic site, to allow further investigation of the settings in that site...
