Marc Laporte

Rating

★★★★★ (0) ?

Description

In edit mode, if I do

((

(and maybe a few letters), an auto-complete should appear, like the quick_edit module. This list should be WYSIWYCA.

This would also be useful in some plugins, when a parameter is wiki=

The most important is PluginInclude, because the main goal of the plugin is to include other pages, which you may not know the exact name.

When in plugin edit mode, an auto-complete could be done with jQuery (ask LPH for details)

Related:

New module: search page name, search text, edit page
