Description

When clicking the Assign white plus sign on green background icon in Admin modules User modules tab, PostgreSQL fails complaining:

The following error message was returned:

ERROR: invalid input syntax for integer: "mnu_application_menu"

The query was:

select * from "tiki_modules" where "moduleId"=?

Values:

1. mnu_application_menu

The built query was likely:

select * from "tiki_modules" where "moduleId"='mnu_application_menu'

Stacktrace:

- /var/www/tiki/trunk/tiki-admin_modules.php : 0 -> {main}(array())
- /var/www/tiki/trunk/tiki-admin_modules.php : 63 -> get_assigned_module(array('moduleId' => "'mnu_application_menu'",))
- /var/www/tiki/trunk/lib/modules/modlib.php : 60 -> query(array('query' => '\select * from `tiki_modules` where `moduleId`=?\n', 'values' => 'array(0=> \'mnu_application_menu\'', 'numrows' => , 'offset' => , 'reporterrors' => ,))

...

Indeed, the query would expect an integer argument, not a string. This is a regression from r8873, which changed modlib's interface. `get_assigned_module()` now expects its first argument to be a moduleId, not a module name.
