Description

This seems solved in Tiki 5.

type content : Problem, way to go around and may be a quick way to go to a solution

Hy,
4.0, 4.1

I test all functions including those that are not finalized.

The problems occurs with Firefox 3.5 not with IE8 (other ie not tested neither opera, google etc...)

In WISIWIG text editing WIKI obtained in circumstances that I can not confirm the background color of textarea is black when you scroll to the end of long text (the text is more long than the height of textarea).

The content text exist and you can see it if you select it and change the text background color. The problem is the scroll with the background property color (in strasa css #F3FCFE color)

Complements

- Problems occurs in wysiwyg mode (not in view source mode)
- If you change the background color of the text you can see it
- The problem is directly linked to scroll, when you change the textarea size (for example go to "fullscreen" edit), the black background appears at the bottom just one line after beginning to scroll down

I hope to have provided informations to go straight to the bug.

Best regards

Comments

Bernard TREMBLAY 05 Jan 10 17:50 GMT-0000

the height attribute of body.wikitext must be set to auto; not to 100%

```
body.wikitext {
```

```
height:auto; /*: 100%; modified BTy:B00104-1 /* for FCKEditor */
```

Runs with Firefox and IE8

I wrote this as comment because I have not still set everything needed to join development team.

Detail explanations exist with the way "height" attribute is taken in account and calculated when real size of text changes and is scrolled while the shown part of the area "shape size" is fixed (the 100%... of the shape...)

Bernard TREMBLAY 05 Jan 10 17:56 GMT-0000

As verified the problem is only present in strasa.css
