Description

it seems there is a bug in 4.1 not allowing to assign perms per file in file galleries. i can only download the file as anonymous if i assign tiki_p_download_files to the whole file gallery where the file is saved in but not when the file is categorized in category with that permission assigned (which should work)

I have this problem also in Version 6.

It seems that category-permissions of the Gallery are accounted for allowing files to be downloaded. Category-permissions for files are only taken in consideration to decide, if files may be displayed in the File gallery listing.

To reproduce

- Create category A & B
- Create group A & B
- Create user A and put into group A
- Create user B and put into group B
- Create a file gallery A in category A & file gallery B in category B
- Give group A & B the global permissions (inherited via registered):
 - tiki_p_list_file_galleries
 - tiki_p_view_fgal_explorer
 - tiki_p_view_file_gallery
- Give only group A the following category-permission in category A
 - tiki_p_download_files
 - tiki_p_list_file_galleries
 - tiki_p_view_fgal_explorer
 - tiki_p_view_file_gallery
- Give only group B the following category-permission in category B
 - tiki_p_download_files
 - tiki_p_list_file_galleries
 - tiki_p_view_fgal_explorer
 - tiki_p_view_file_gallery
- Upload as admin a file A into gallery B and put into category A (note down URL)
- Upload as admin a file B into gallery A and put into category B (note down URL)
- Navigate as user A to file galleries
 - Only gallery A is displayed --> Expected, GOOD!
 - Content of Gallery is empty (file B is not displayed) --> Expected, GOOD!
 - enter URL to File B -> file is beeing downloaded --> Not expected, BAD!
 - Expected --> "Permission denied"
 - enter URL to File A -> "permission denied" --> Not expected, BAD
 - I expected, that i can download.

Try the same for User B, result is vice-versa.
