### Description

Tested using Wysiwyg HTML mode page and inline editing

1) When in HTML mode, the non-plugin image dialog should/must be shown.

The CkEditor plugin has now been activated again. So, it's possible to assign it manually.

If Wysiwyg HTML mode is selected in the admin wizard, the CkEditor image dialog should be displayed instead of the plugin img dialog.

2) External Link URL doesn't work

It is possible to enter wiki styled links directly, e.g. <http://www.yahoo.com>.

These are parsed when inline editing more is closed.

This works, but it would be even better to have the link "visible" while inline editing mode is active.

3) Anchor doesn't seem work - No feedback in editor

It visible again, when switching to the full wysiwyg editor

Can be removed from inline editing toolbar?

4) Find Text doesn't work

Pressing the toolbar button does nothing

5) Text Replace doesn't work

Pressing the toolbar button does nothing

6) Wysiwyg Help is displayed.

This dialog contains 2 parts

A ) Short wysiwyg help text.

Starts with: The WYSIWYG editor in Tiki 6+ is CKEditor, the new version of FCKEditor (used in Tiki since version 2.0)

B ) The plugins

Adding a plugin will make a section read-only.

This may not be expected.

The inline editor toolbar should not use plugins in my opinion, due to this read-only effect.

A is outdated, and may not be needed. It is questioned whether B should be there at all.

So, this button should maybe be removed all together.

7) Templates button should go?

I see no use for it. If kept it should probably link to the Tiki Content Templates

8) Cut, Copy and the Paste buttons all bring up a browser dialog

It says "Your browser security settings don't permit ...." ...

and finally recommends Ctrl+C, Ctrl+X and Ctrl+V which all work fine.

All these buttons should be removed.

9) Table button doesn't work.

The HTML table dialog must be used when in HTML mode. It's much more compatible and powerful than the wiki one.

The jCapture button is also a plugin, which causes the section to turn read-only once it's saved.

However, this plugin is so useful, that I believe it should be kept.

Maybe it's possible to warn about the section turning read-only?

10) Indent left and indent right buttons don't work.

They are grayed out, and nothing happened when they are pressed.

## Comments

Philippe Cloutier 08 Jan 18 16:06 GMT-0000

How can one reproduce this? How do you use inline editing?
