Description

Images uploaded to tracker field image do not respect multitiki paths.

When you upload an image to this type of field, they go to

img/trackers/

When you are in a multitiki of, let's say, site1.example.com and site2.example.com, you have a folder for site1 at:

img/trackers/site1.example.com/

but your image files don't get uploaded there, but to the general

img/trackers/

And the same with all the other multitiki sites.

When you want to backup files, or migrate a site to a new server, you are in trouble to know which files belong to which site from the multitiki installation.

For consistency with how multitiki works, they should be uploaded to, and used from, the multitiki-aware path:

img/trackers/site1.example.com/
