Description

The backlinks in the file gallery don't appear to work. At lest they do do nothing with my install and configuration.

Not really sure how to proceed, but just to let you know. It could have been a very useful feature to me 😞

Happy to give more info if you like. Backlinks for wiki pages seems to be working well. 12 LTS installed. Latest version (installed just over a week ago)

Hi drsassafras,

I've created a show instance for you (u/p:admin/12345). Can you have a look and ensure this is what you are referring to?

I have a few files that I've made reference to in wiki pages and you want to be able to see the backlinks of the pages that are linking these images right?

I just want to ensure that I've recreated your issue appropriately. Can you confirm this please and we can have a look and see if this is something we might be able to fix.

Thanks!

Pat
