Description

On <https://themes.tiki.org/Happy+Scroll>, a code plugin is being used to show the source code of a wiki page that contains some module plugins, like this:

```
{module module="menupage" pagemenu="Homepage_Section1" nobox="y"}
```

.

But even though this is just example code and not really a functioning plugin, email notifications to approve the plugin are being sent. Here's the content of the email:

Plugin module is pending approval on No title specified.

See all the pending plugins in the plugin approval page.

Plugin arguments:

```
* module: menupage
* pagemenu: Homepage_Section1
* nobox: y
```

Plugin syntax in a code example (inside the code plugin, etc.) should be recognized as not functional plugins requiring approval.
