Description
Something about namespaces seems to conflict with url sending user after updating tracker item with SEFURL

Url where I update an item is:

http://example.com/item608?from=SERGEN-Xavier%3A_%3AMagatzem-LH-AraVinc

Editing the tracker item is done in a modal window. I update a datepicker field in the tracker, save, and I'm re-sent to this full url in the browser:

sergen-xavier:_:Magatzem-LH-AraVinc

i.e., with no http, nor domain, etc.

The tracker item edit was saved properly, it's just disorienting for the user to be sent to that defective url.
