Description

This bug is similar to Automatic table of contents (auto-TOC) shows calls to SUP plugin as regular text, but about the FOOTNOTE plugin instead of SUP. As explained there:

Chealer wrote:

The auto-TOC implementation does not know how to deal with advanced titles. When titles contain plugin calls, since the links can't contain HTML, auto-TOC just strips HTML tags (see the declaration of `aText` in `autoToc.js` (`var aText = $.trim($this.text());`), which may or may not give a valid result.

For FOOTNOTE, this causes the footnote number to be displayed raw (not in superscript), and clicking on the number brings to the section, rather than to the footnote. For example, with the following heading:

! Buggy{FOOTNOTE()}For now{FOOTNOTE} heading
...the TOC entry would just display a raw "Buggy1 heading".

I believe it would be best to hide the number, as Microsoft Word 2013 does in TOC-s. Otherwise, it should be in superscript.

This bug (like #6703) is similar to its maketoc pseudo-equivalent: Tables of Contents (maketoc) can be broken when headings call plugins (such as ANAME and FOOTNOTE) .

This could be solved with jQuery DOM manipulation by removing the links from the out-of-DOM copy of the titles when building the TOC, but can jQuery manipulation operate on elements not in the DOM?

Philippe Cloutier 29 Jun 18 16:42 GMT-0000

I haven't understood how jQuery handles out-of-DOM stuff, but I managed to do that in Tiki 15 simply adding these 2 lines:

```
var headerContents = $this.clone(); headerContents.find('a.footlink').remove();
```

...just above:

```
var aText = $.trim($this.text());
```

...which changes to:

```
var aText = $.trim(headerContents.text());
```
