Description
    When we enable the Notifications system in a real-world tiki site, with some sort of activity, we usually end up attempting to review the notification log (tiki-monitor-stream) with plenty of duplicated entries (a wiki pages was edited many times the same day, a tracker items was editted many times in the same time frame, etc.)

    Some sort of low-hanging-fruit would be to expose the PivotTable UI (like the one we use in PluginPivotTable) to display those entries from your own tiki-monitor-stream data with usual default time-based aggregations by months, weeks and days.

    This is related to the other similar feature requests to allow to use action log or activity stream as data sources to the PluginPivotTable

    My 2 cents.
