Description
I've just discovered the feature allowtableexpansion while using dev.t.o. Nice addition to the UI/UX!

However it seems to be that something needs tweaking still in its implementation in PluginList here (specially compared to the implementation in PluginTrackerList.

Example of allowtableexpansion using PluginTrackerList:
https://dev.tiki.org/Spreadsheet#Open
Icon: fullscreen-like
It DOES work as expeced (even with floating autotoc and side columns)

Example of allowtableexpansion using PluginList:
https://dev.tiki.org/H5P#Open_or_Pending
Icon: play-like (imho, the fulllscreen-like icon as shown through plugintrackerlist is more intuitive)

It DOES NOT work as expeced (even with floating autotoc and side columns): nothing relevant seems to happen for the end user.

HTH
